Introduction

Introduction to Project

An online camera shop is a virtual store that takes the place of a physical shop, providing a platform for buying and selling a wide range of items, services, and digital products. It offers a simplified experience for customers by making it easy to place orders, handle payments, manage shipping, and receive customer support. The shift to e-commerce brings several advantages, including cost savings due to reduced overhead expenses, the ability to reach customers worldwide, the opportunity to reconnect with previous customers, and the ability to personalize each shopper's experience based on their preferences and browsing history.

Goals and Objectives

The goals of the camera shop's e-commerce website project are as follows:

1. Create a website using html, css, and js for e-commerce website.
2. Build a user-friendly and efficient website that fulfils all requirements.
3. Provide detailed information about the organization.
4. Create awareness and appreciation for the importance of cameras.
5. Organize products into relevant categories with comprehensive details.
6. Connect the camera store with social media platforms like Facebook, Instagram, and others to increase visibility and engage with customers.

Use of HTML, JavaScript, and CSS in project:

HTML

HTML, known as Hyper Text Markup Language, is the standard language used to construct web pages. It employs markup to define the structure of web pages, using tags as building blocks to represent HTML components. These tags help identify various types of content like headers, paragraphs,

and tables. Software like NotePad++ or Sublime Text can be used to edit HTML files, which are saved with the .html extension. HTML has different versions, with HTML5 being the latest. While browsers don't display the tags themselves, they play a crucial role in rendering the page's content. HTML can be enhanced with CSS and JavaScript to add visual appeal and interactivity to web pages (javatpoint, NA).

CSS

CSS is a language that defines the appearance of HTML elements on a computer screen. It allows us to customize web page styles, including design, layout, and display adjustments for different devices and screen sizes. These style instructions are typically saved as .css files on the server. CSS has a simple syntax, consisting of selector blocks representing the HTML elements we want to style, and declaration blocks containing CSS property names and values separated by a colon. Declaration blocks are enclosed in curly braces and terminated with a semicolon. CSS selectors enable us to target HTML elements based on their name, id, class, attribute, or other criteria. Additionally, it is possible to group multiple HTML selectors if needed (P., NA).

Java Script

Initially, the programming language now known as JavaScript was called "LiveScript," but it was later renamed to "JavaScript" due to the popularity of the Java Programming Language at that time. Despite the similar name, JavaScript and Java are distinct languages, and JavaScript has evolved into a fully independent language with its own specification known as ECMAScript. Unlike Java, JavaScript doesn't require special preparation or compilation to run. It is executed as plain text, making it more accessible and flexible. JavaScript can be executed not only in web browsers but also on servers and various devices that have a JavaScript engine. The browser's embedded engine is commonly referred to as a "JavaScript virtual machine. javaScript plays a vital role in making web pages interactive and dynamic when embedded within HTML. It allows users to interact with web content seamlessly. Popular text editors like Note Pad++ or Sublime Text can be used

to write JavaScript code, which is typically saved with the .js file extension (tutorialspoint , n.d.).

Verdict

It is clear from the examination of our camera e-commerce website report that the site has both strengths and weaknesses. The user interface is simple to use and appealing visually, making it simple for visitors to explore the products. The product descriptions on the website are thorough and well-written, giving potential buyers the information, they need to make wise buying decisions. There are some things, however, that need attention. The page loads slowly, which could cause user annoyance and higher bounce rates. The checkout process is very inefficient, and some customers have trouble making their payments. Implementing techniques to improve website performance, speed up page loads, and simplify the checkout process would significantly boost user experience overall and improve the number of conversions.

Discussion and Analysis:

In this section of the Discussion and Analysis, a comprehensive overview is provided regarding the creation and production process of the web pages for my websites. The focus is on discussing the goals and ideas behind these web pages, alongside presenting a screenshot showcasing their Wire Frames and Graphic Designs. Furthermore, a detailed account of the development process employed in crafting these web pages is provided.

Selected Text Editor

VS code

A text editor is a basic software application used for generating, altering, and manipulating plain text files. It serves various purposes such as developing computer programs, editing source code in programming languages, making

changes to HTML markup, and constructing web pages or design templates. Visual Studio Code (VS Code) is an efficient and highly customisable source code editor. Developers may write code more effectively because to VS Code's intelligent code completion and suggestions, known as IntelliSense. Additionally, it has an integrated terminal, so you can run commands and scripts without switching between the editor and external terminals. Git and other widely used version control systems are smoothly integrated into the editor, making it simple to manage code repositories and work with other developers (Visual Studio Code, n.d.).

Tools used while developing wireframe:

Balsamiq

Balsamiq Cloud offers a range of pricing options tailored to suit your requirements, making it a popular choice among UX designers, agencies, and developers. With its web-based platform, Balsamiq Cloud grants you convenient access to over 75 design themes and templates, allowing for rapid creation of designs and wireframes. Currently, it is primarily utilized for producing low-fidelity mock-ups and wireframes. Additionally, the collaborative features enable seamless teamwork by enabling you to upload your work and assign various roles to team members (Balsamiq , n.d.).

Name of the page

Home Page:

Explanation:

The first page visitors see when they go to a website is called the home page. It's like the front door of a website and has a big impact on how people feel and interact with the site. Webmasters can customize the home page to make it more appealing and make sure visitors have a good experience. This is important because the home page is where people usually start when they come to a website from a search engine.

Featured Product

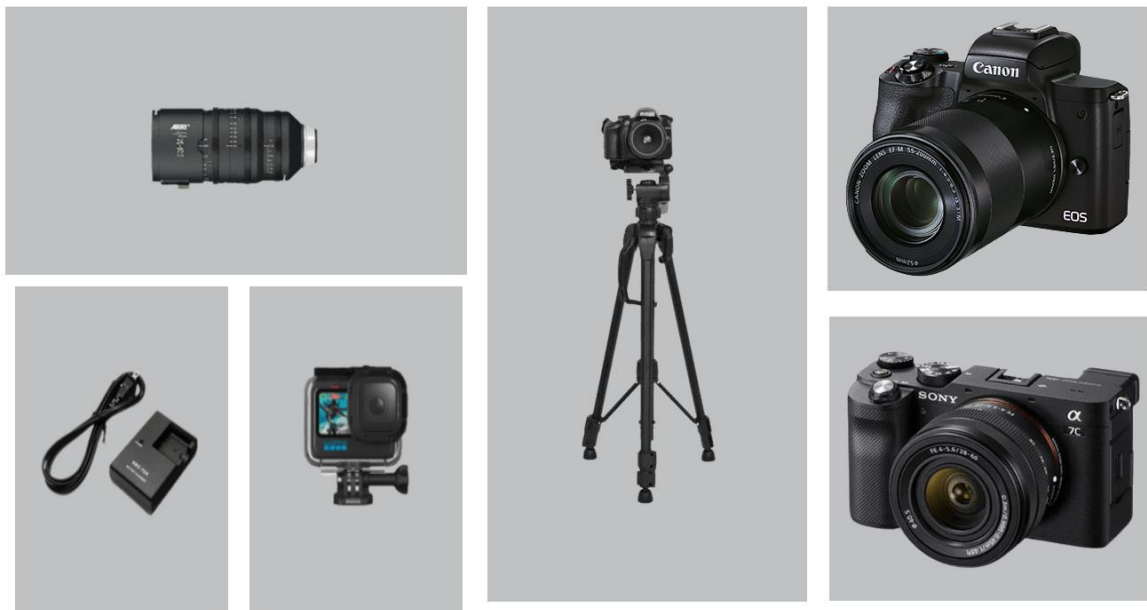

Figure 5 Home page(b)

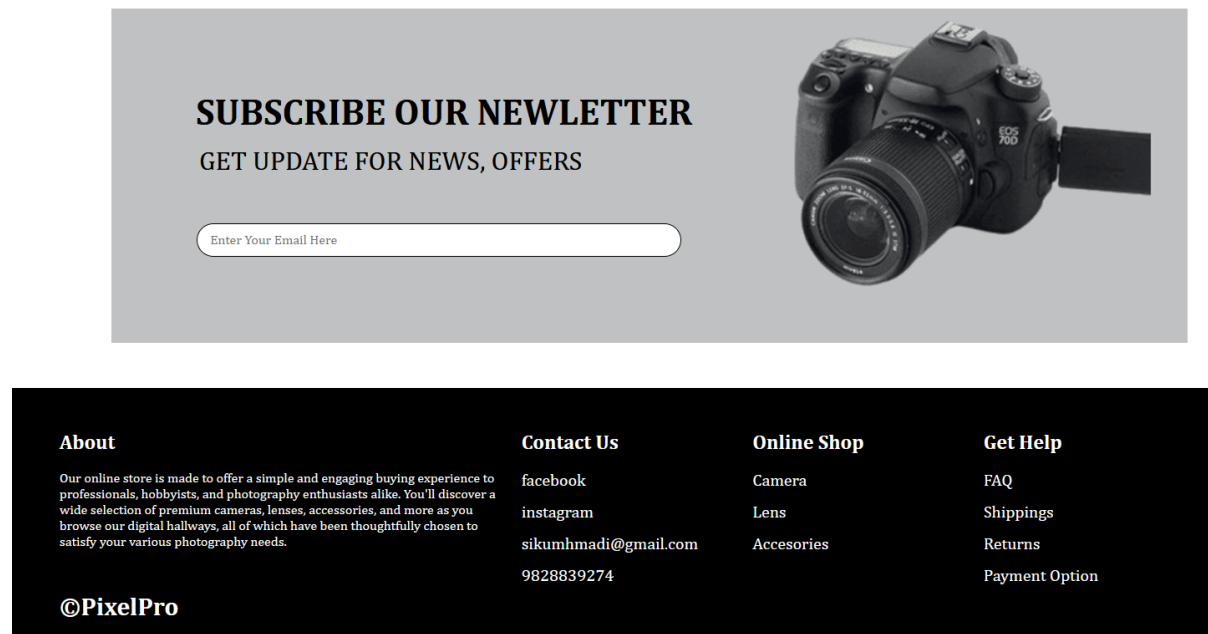

Figure 6 home page(c)

Product Page:

Explanation:

We use high-quality pictures of our products to show every detail clearly. Our prices are easy to understand so customers can quickly see how much things cost. We use strong and persuasive messages to encourage customers to buy. Our product descriptions are detailed and helpful, giving customers all the information, they need to make a good choice. We also show positive reviews from happy customers to build trust. We make sure our products have a consistent look and feel. Each product page is a helpful guide for customers where they can find information, read reviews, compare options, and make their purchase smoothly. Our website is easy to use, and adding items to the shopping cart is quick and simple. We give instant feedback when a purchase is complete

Product page:

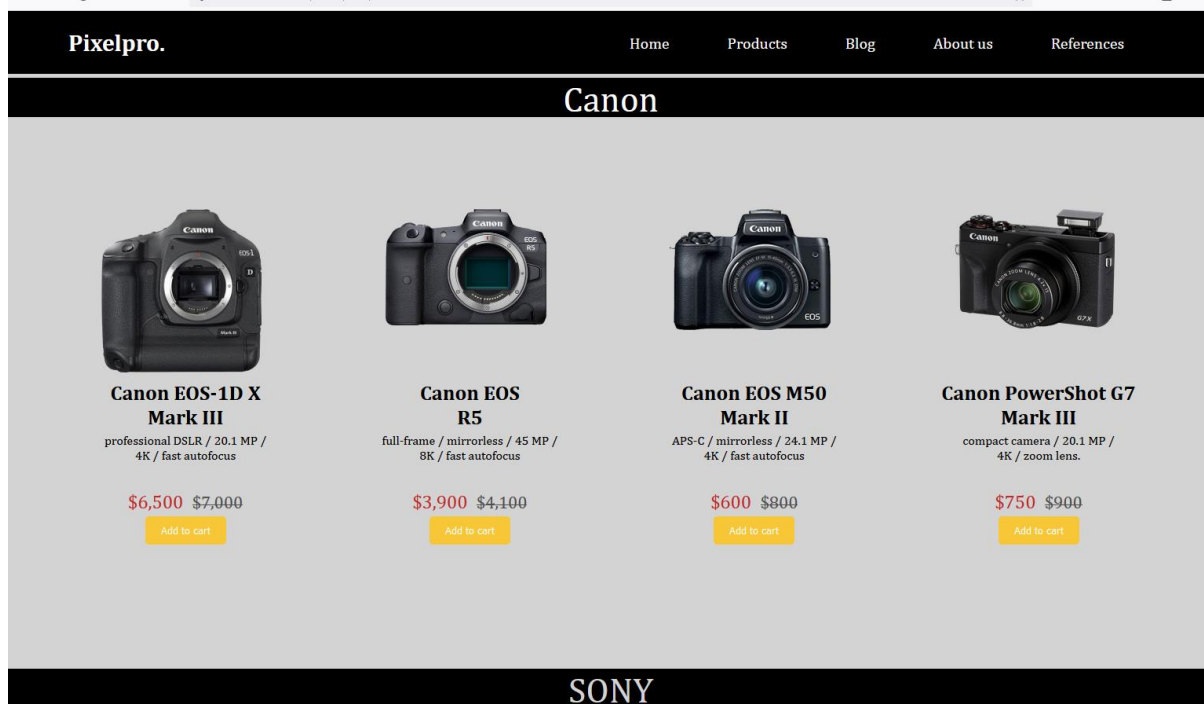

Figure 8: product page

Blog page:

Explanation:

A blog page is a special section on a website where people regularly write and share articles or stories. It's an online place to find information, opinions, and experiences about different topics. The newest posts are shown at the top, and you can scroll down to read older ones. Blogs cover various subjects like hobbies, news, and insights about industries. Writers use blogs to share interesting things and engage with readers through comments and discussions. Anyone can create a blog to share knowledge and connect with people who are interested in their topics.

Blog Page:

Figure 10: blog page

Reference page:**Explanation:**

A reference page is a section on a website that focuses on sharing information and resources about research conducted by individuals, organizations, or institutions. It serves as a platform to present findings, studies, and scholarly work in a specific field or topic. On a reference page, you can find summaries of research projects, links to full reference papers or reports, and relevant data or statistics. It may also include details about the researchers involved, their credentials, and affiliations. The main purpose of a research page is to make valuable knowledge easily accessible, promote transparency, and allow others to learn from the research findings. It is a central hub for researchers, academics, professionals, or anyone interested in exploring and referencing scholarly work in a particular area

Wireframe of reference page:

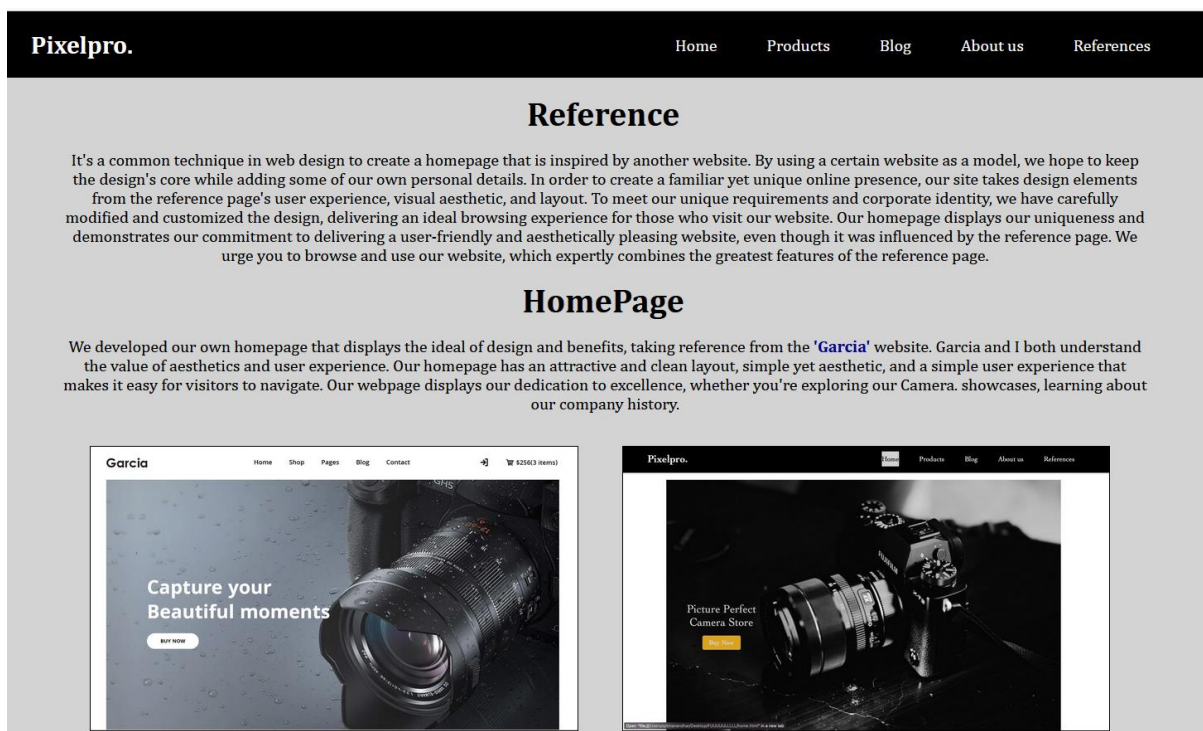

Figure 12: reference page

About us page:

Explanation:

An "About Us" page is a section on a website that provides a simple and convenient way for visitors to get in touch with the website owner, organization, or team behind the website. It typically contains essential contact information, such as an email address, phone number, or a contact form. This page allows visitors to reach out with questions, inquiries, feedback, or any other communication they may have. It serves as a direct channel for establishing communication and connecting with the website's owners or administrators. The "About Us" page provides an accessible means of initiating contact and encourages engagement between the website and its visitors.

Feedback form

Explanation:

A website's feedback page is a special area where customers can express their thoughts on the site or its content. Users can use it as a platform to voice their opinions, improve problems, or provide feedback on their experiences.

Forms or places are frequently included on feedback pages so that users can submit their comments, contact information, or additional relevant data.

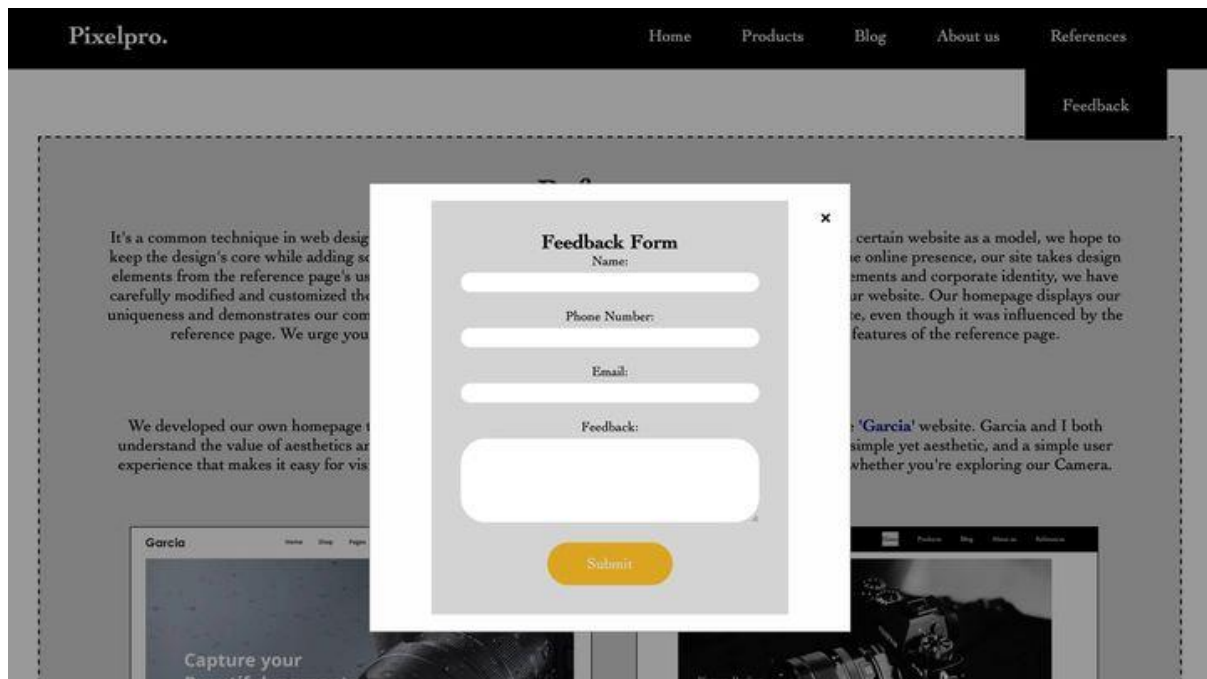

Website owners can use this input to increase user experience overall, solve user problems, and improve their website.

Wireframe of Feedback form:

The wireframe shows a web browser window titled "A Web Page" with a URL bar containing "https://". The website layout includes a navigation bar with links: [Home](#), [Products](#), [Blog](#), [About Us](#), and [References](#). The main content area is divided into two sections: "Reference" and "HomePage", each containing placeholder text. Below the "HomePage" section are four rectangular boxes with diagonal lines, representing images or placeholders. To the right of the main content area is a "Feedback" form. The form includes fields for "Name:", "Phone Number:", "Email:", and "Feedback:", each followed by a text input field. A "Submit" button is located at the bottom of the form. An arrow points from the "References" link in the navigation bar to the "Feedback" form.

Figure 17: wireframe of feedback form

Feedback form

The image shows a website for 'Pixelpro.' with a navigation bar containing links for Home, Products, Blog, About us, and References. A 'Feedback' link is also visible in the top right corner. A feedback form is overlaid on the page, featuring a title 'Feedback Form' and a close button (X). The form includes input fields for Name, Phone Number, Email, and Feedback, followed by a yellow 'Submit' button. The background of the website shows text about design techniques and a section titled 'Garcia' with a sub-header 'Capture your Beautiful moments'.

TESTING

Some tests are to be run to check whether the website is operating as intended

Test 1

Objective	To test the automatic slider functionality implemented using HTML, CSS, and JavaScript
Action	Observe the slider
Expected Result	Slider image changes automatically at set intervals
Actual Result	Slider image changes automatically at set intervals
Remarks	Passed

Table 1: automatic slider test

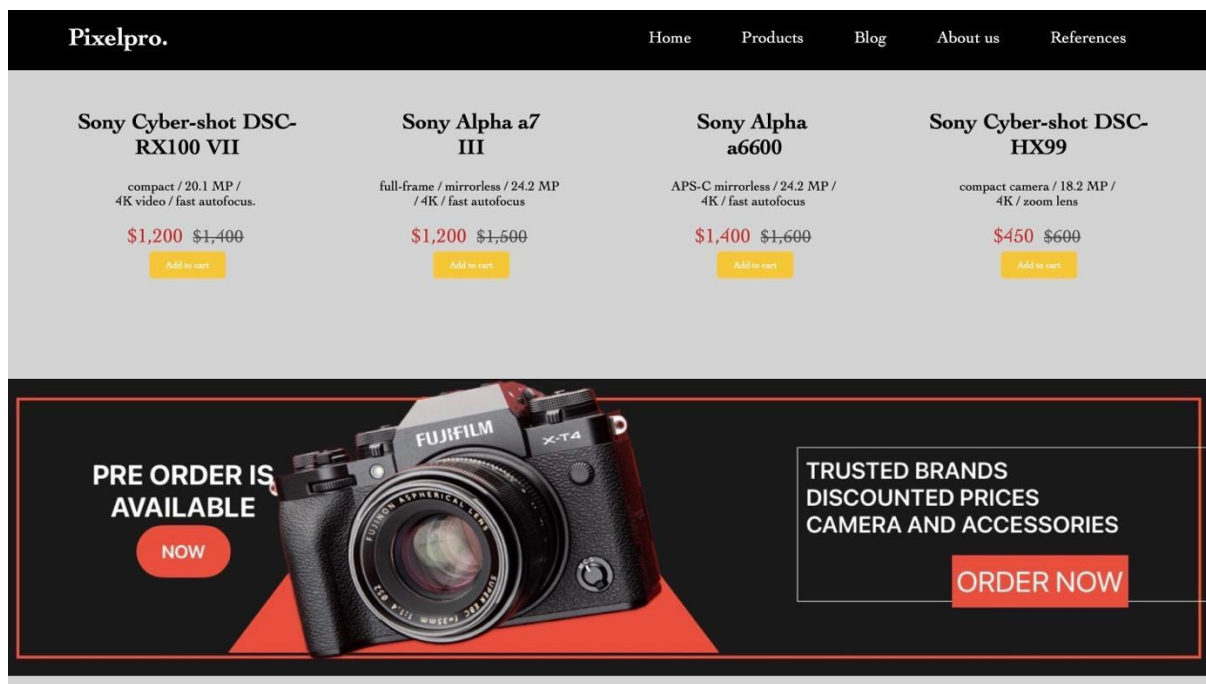

Figure 19: automatic slider(a)

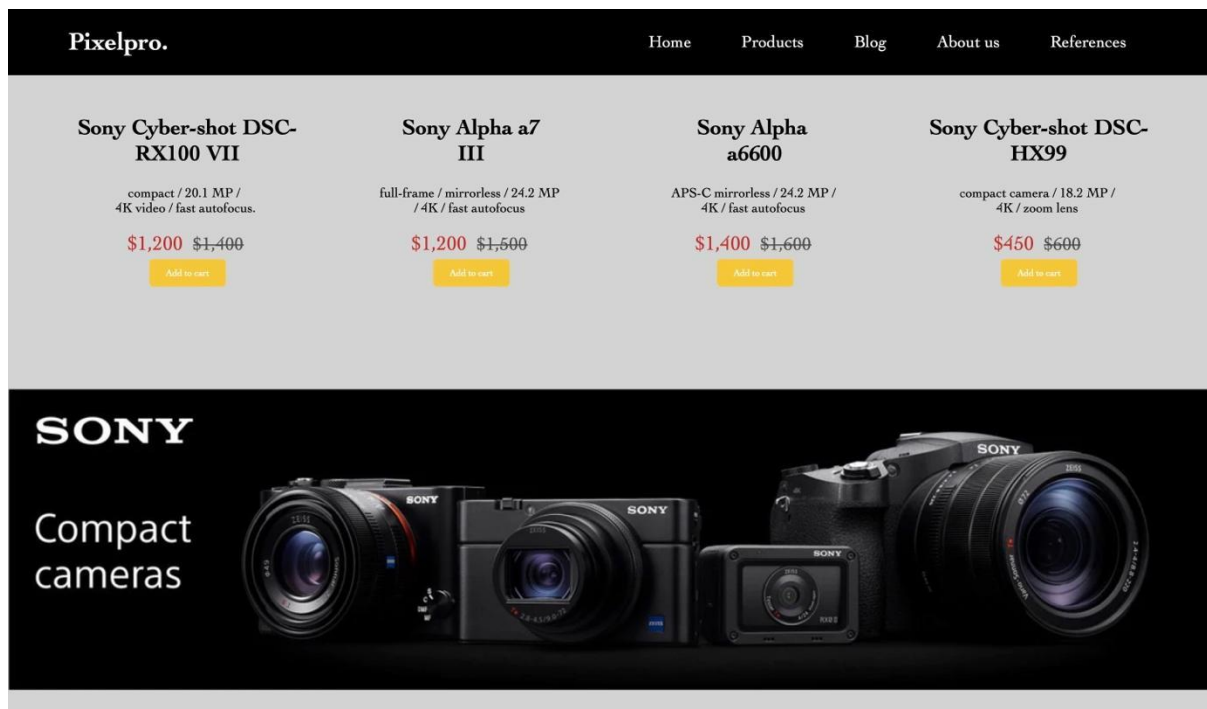

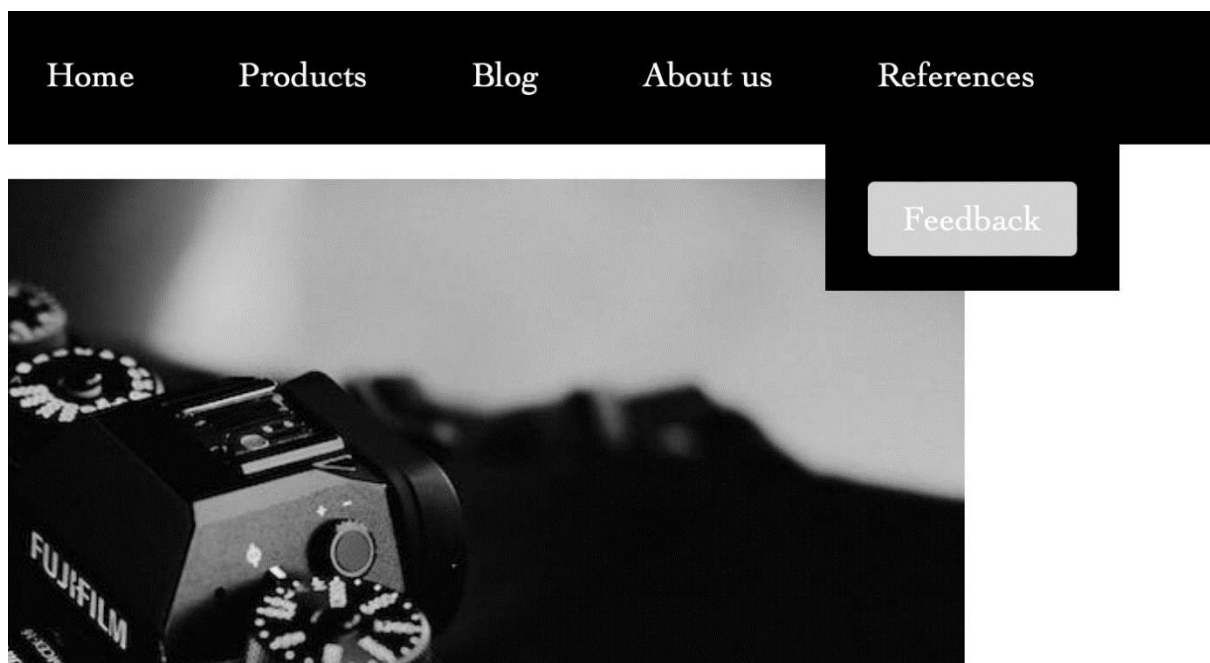

Figure 20: automatic slider (b)

Test 2

Objective	Test pop-up display used in feedback form.
Action	Trigger the pop-up(feedback) button.
Expected Result	Pop-up window (feedback form) appears
Actual Result	Pop-up window appears
Remarks	Passed

Table 2: pop up display test*Figure 21: testing pop up display*

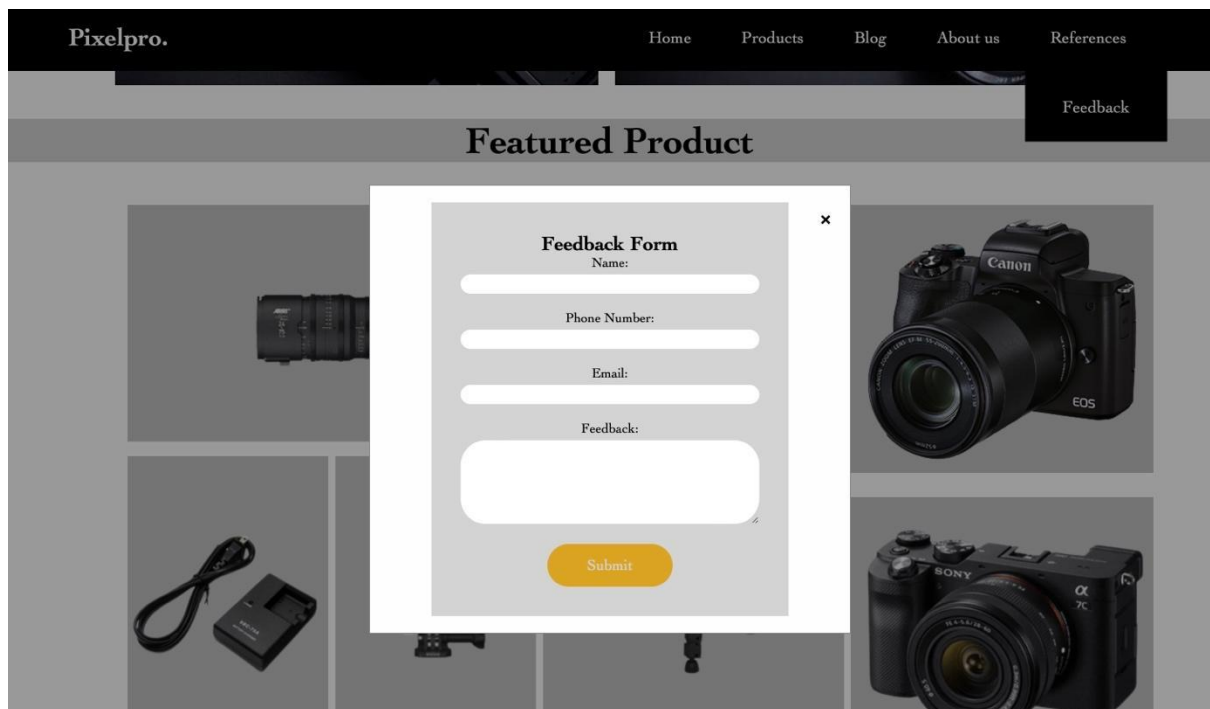

Figure 22: pop up display result

Test 3

Objective	Test pop-up close functionality
Action	Click on the close (x) button
Expected Result	Pop-up window closes
Actual Result	Pop-up window closes
Remarks	Passed

Table 3: testing pop up display close function

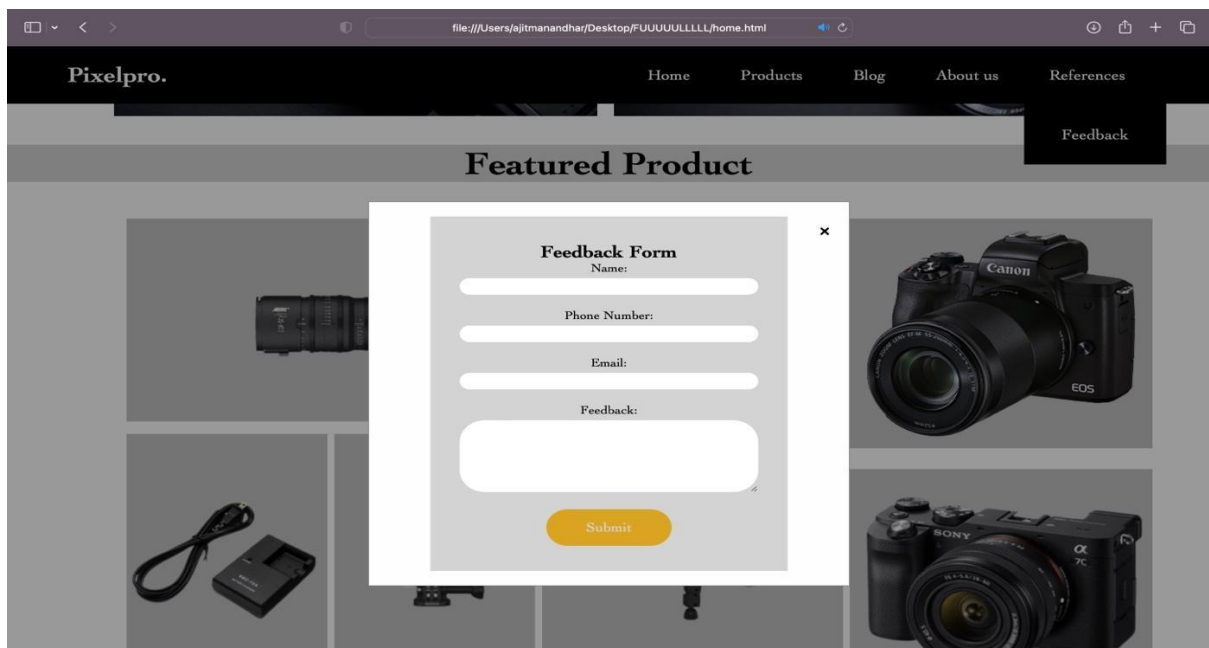

Figure 23: testing pop up display close function

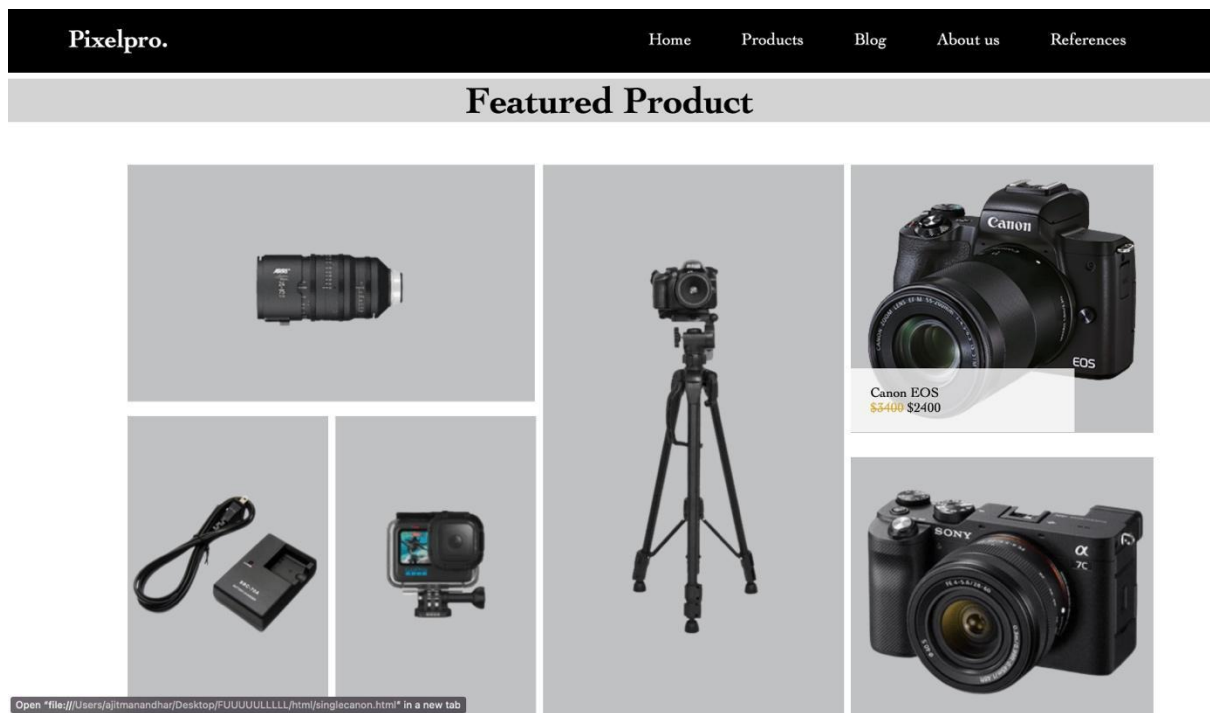

Figure 24: pop up display close function result

Test 4

Objective	Test hover effect on nav-bar
Action	Hover over content of nav-bar
Expected Result	Dropdown menu opens, and text colour and background colour of content is changes
Actual Result	Dropdown menu is opened, and text colour and background colour of content is changed
Remarks	Passed

Table 4: testing dropdown menu

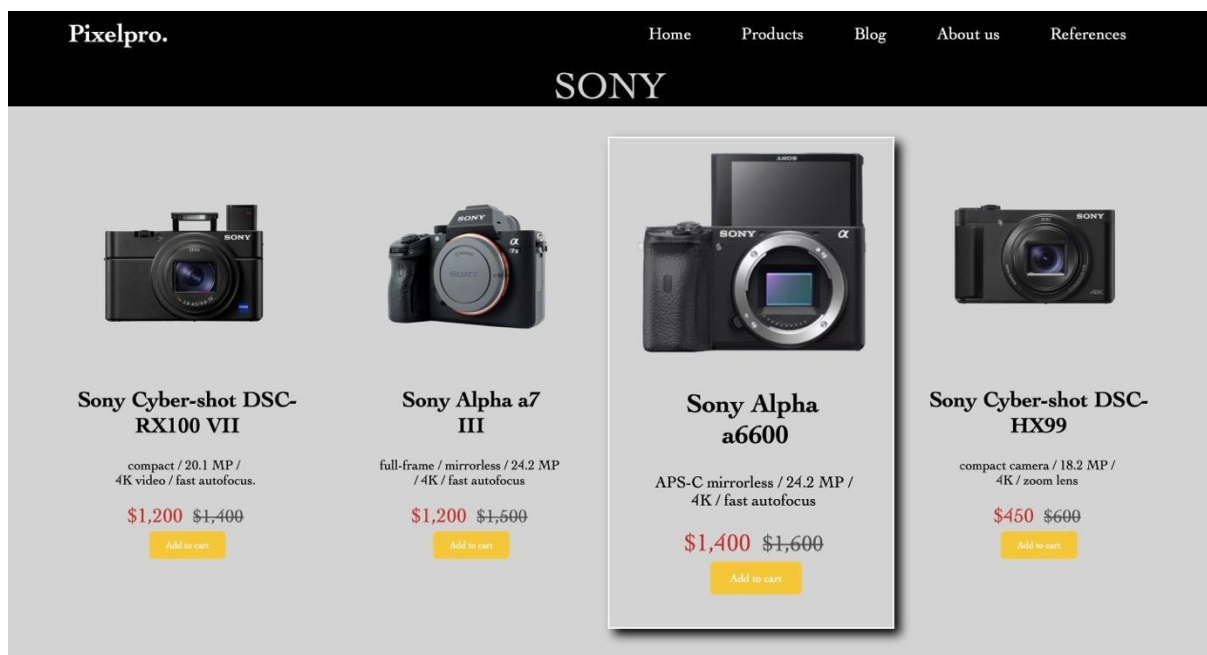

Figure 25: testing dropdown menu

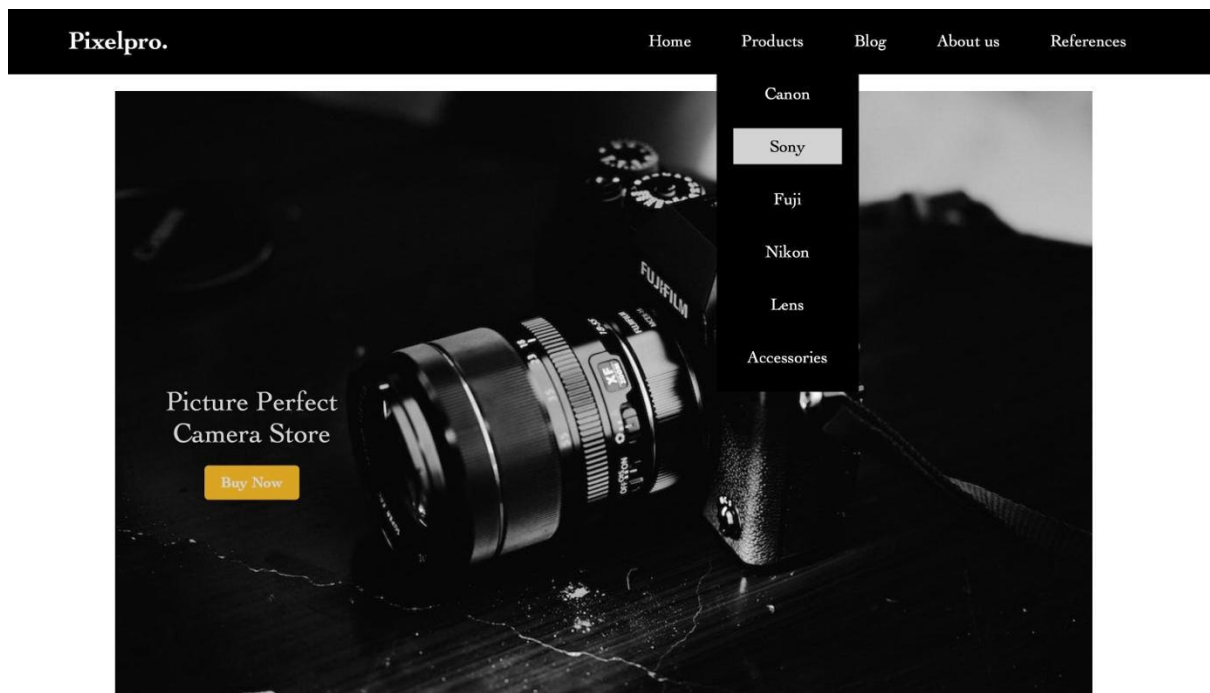

Figure 26: dropdown menu result

Test 5(a)

Objective	Test the functionality of internal links
Action	Click on the internal link
Expected Result	Page navigates to the specified section
Actual Result	Page navigates to the specified section
Remarks	Passed

Table 5: testing internal link

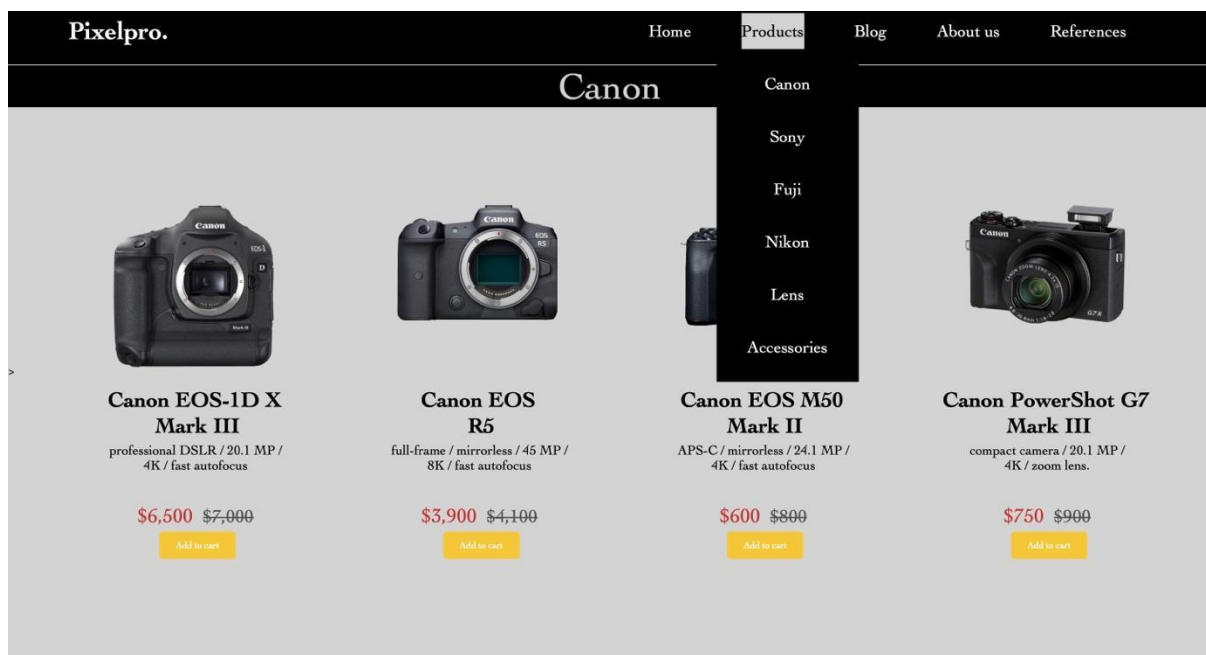

Figure 27: testing internal link

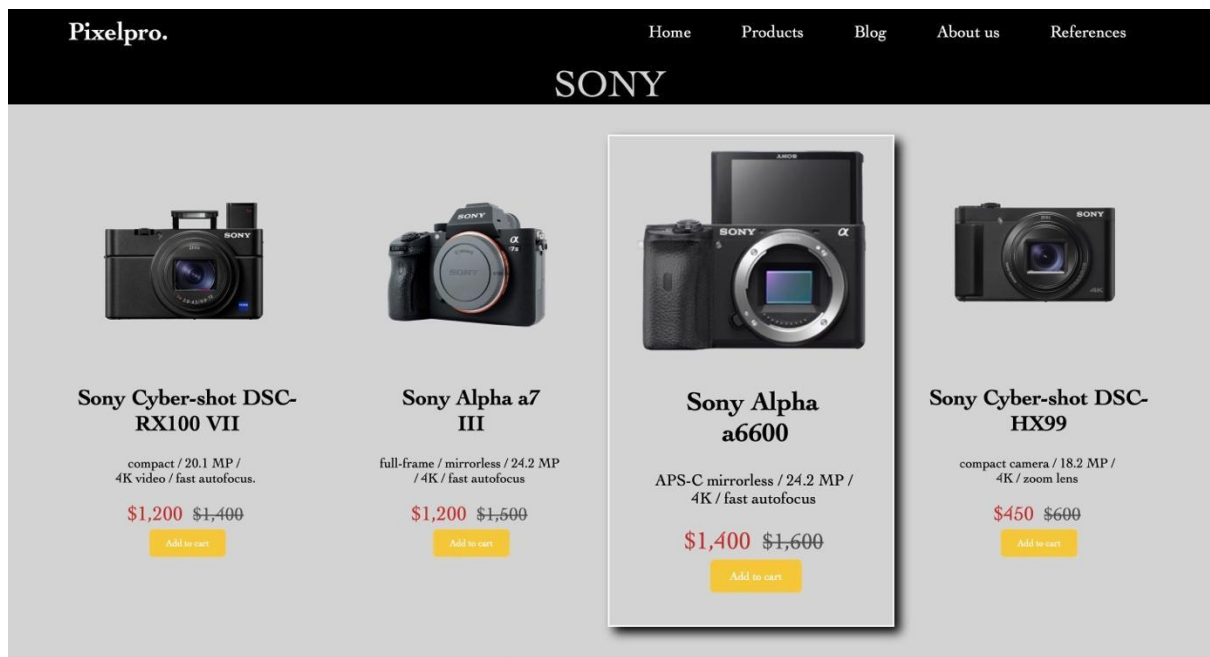

Figure 28: internal link result

Test 5(b)

Objective	Test the functionality of external links
Action	Click on external link
Expected Result	New tab/ window opens with the external page
Actual Result	New tab/ window opens with the external page
Remarks	Passed

Table 6: testing external link

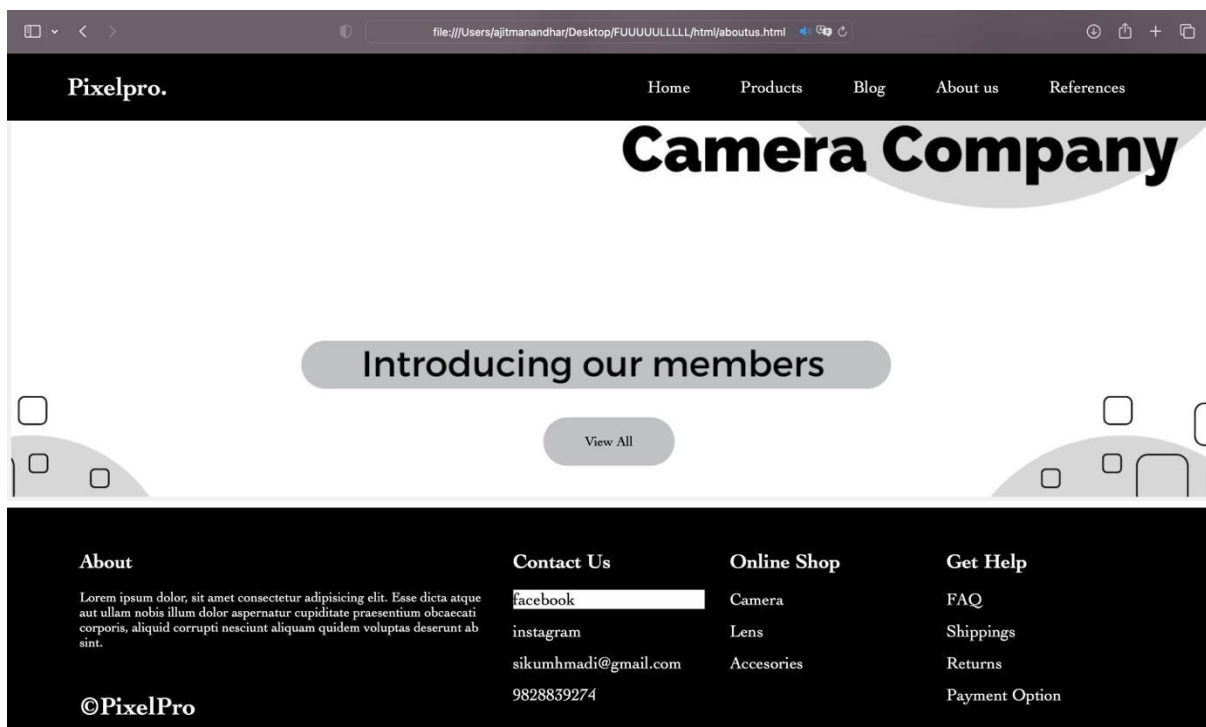

Figure 29: testing external link (a)

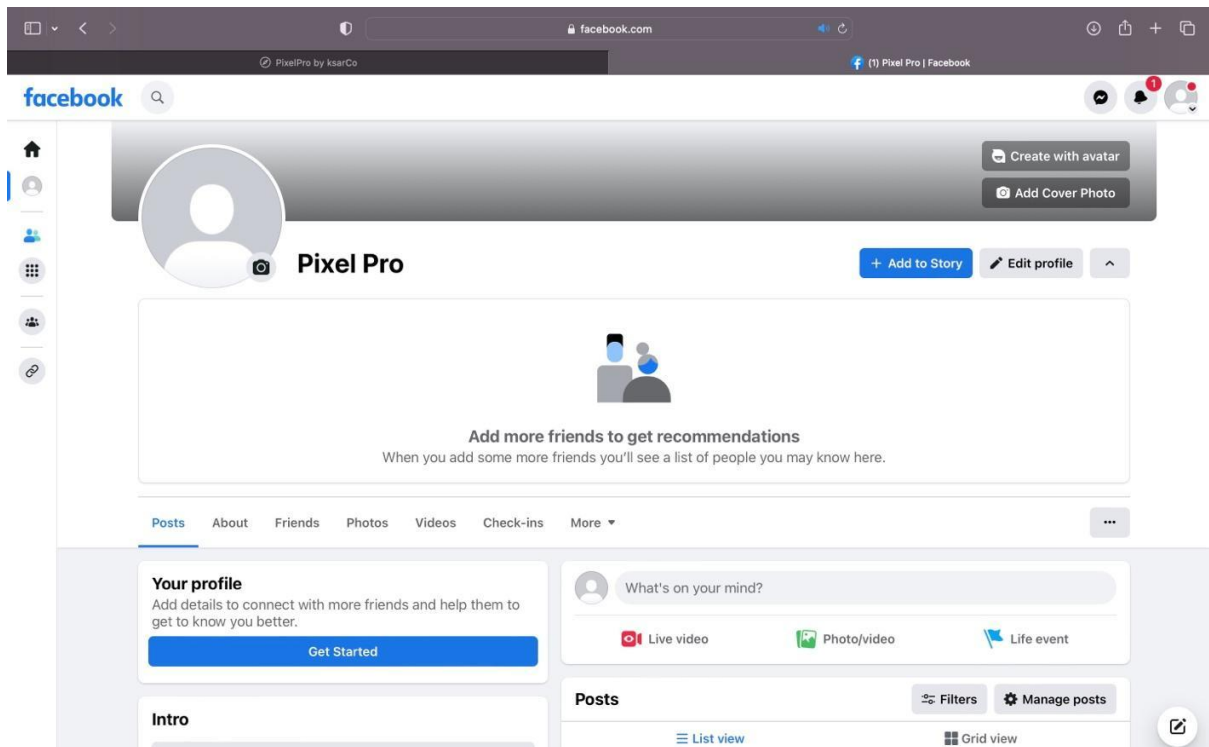

Figure 30: external link result

Conclusion:

This project focuses on creating an e-commerce website centred around selling cameras. The main goal is to improve the overall online buying and selling experience. The website will enable individuals to purchase and sell various goods, services, and digital products directly from their homes, eliminating the need for physical stores. With an e-commerce website, users can place orders, complete secure payment transactions, manage shipping and logistics, and receive customer support. One of the primary advantages of e-commerce is its cost-effectiveness, but it also offers other benefits such as global reach, targeted marketing to customers, and personalized shopping experiences. Through this project, we aim to enhance our skills in HTML, CSS, and JavaScript while working with various markup languages to create diverse types of documents.

This e-commerce website is to build a user-friendly interface for buying and selling cameras, but it will also place a high value on offering in-depth product information and reviews. In order to make well-informed buying selections, users will have access to comprehensive specifications, features, and customer feedback. To improve the purchasing experience and provide customers a closer look at the cameras they are interested in, high-quality product photographs and videos will be added.

The website will place an extreme value on reliability and confidence as a way to attract customers and keep them coming back for more purchases. This project intends to transform the way people buy and sell photography gear by developing an e-commerce platform focused

on cameras. In the end, it hopes to build a robust online marketplace for both amateur and professional photographers by offering simplicity, security, and an easy purchase experience.

      <!--blog on 'Technology'-->
      <div class="actual-blog-text1">
        <p>Technology is the practical application of scientific
information, tools,
        and procedures to solve problems or improve the lives of
humans. It refers to a wide range of inventions that have significantly
        influenced and changed the modern world, ranging from
straightforward tools and machines to complex systems and networks.
        </p><br>
        <div class="image-container"></div>
        <p>Technology has an important effect on many parts of our daily
routine in today's interconnected and digitally transformed world,
        such as communication, transportation, healthcare, education,
entertainment, and more. It has given us the power to instantly access
        an enormous amount of information, communicate with people around
the world, and carry out jobs successfully and efficiently.
        The ability of technology to increase output as well as
effectiveness is one of its primary benefits. Technology has streamlined
        processes, reduced manual labor, and enhanced production
throughout industries, from manufacturing where automation and robotics

```

are used to offices where cutting-edge software and applications are used. In addition to enhancing profitability for businesses, this has given people more leisure time and creative opportunities.

</p>

<p>Technology directly affiliated with the business and the economy inflation and deflation

likewise,

it's no surprise that technology business has grasped the local and global population, albeit

the

exploitation of it has many tradition based business on disarray. Similarly, technology has been beneficial in promoting

creativity and advancing society. It has made it possible for ground-breaking developments in a variety of industries,

including artificial intelligence, renewable energy, space exploration, and medicine. These developments have the ability to

address major problems, raise standards of living, and bring fresh opportunities for the future.

However, technology has two sides to it. It has many advantages, but it also has risks and obstacles. To ensure fair access and ethical use of technology, concerns about privacy, security, ethical issues, and the digital divide must be addressed.

</p>

<p>Technology has contributed to the growth and enhancement of mankind as a whole. Living is now more convenient because of

advances in technology. Some of the best things technology has given us are the ability to communicate with people around the globe,

travel across great distances, have access to endless entertainment, and prepare and store food with ease. But is technology actually

a blessing for people? Well, there have always been differing opinions on this. Although technology has made it possible to live a

better life, there are drawbacks that should not be ignored. All forms of pollution have dramatically increased as a result of the

ongoing use of modern equipment and the manufacturing process for it. Many health problems are now being caused by the increasing

pollution. Implementing technology excessively has also linked to issues including dimensions and visual impairment. In addition,

far of connecting people, it has isolated them socially.

Furthermore, it has resulted in fewer work prospects, especially for members of the labour class.</p>

<p>The amount of harm that technology has inflicted on the environment and humanity is a serious worry, even while it has

undoubtedly improved lifestyles and helped economies develop. The world we live in has changed as a result of the dynamic

and always changing force known as technology. Every element of our life has been impacted by it, advancing development,

```

        encouraging innovation, and empowering people and societies.
We can create a future that fully utilizes technology's
        advantages for the advancement of humanity by realizing its
potential while also being aware of its drawbacks.</p><br>
    </div>
</div>
</div>

<div class="actual-blog">
    <!-- heading for the blog -->
    <div class="blog-heading">Positive and Negative impact of Technology
    </div>
    <!-- published date of the blog -->
    <div class="article">
        28<sup>th</sup> January, 2023<br>
    <!-- author of the blog -->
        Sikum Hangma Madi
    </div><br>
    <!-- contents of the blog -->
    <div class="actual-blog-text">
    <!-- 'positive and negative impact of technology'-->
        <div class="actual-blog-text1">
            <p>The amount of harm that technology has inflicted on the
environment and humanity is a serious worry, even while it has
            undoubtedly improved lifestyles and helped economies develop.
The world we live in has changed as a result of the dynamic
            and always changing force known as technology. Every element
of our life has been impacted by it, advancing development,
            encouraging innovation, and empowering people and societies.
We can create a future that fully utilizes technology's
            advantages for the advancement of humanity by realizing its
potential while also being aware of its drawbacks.</p><br>
            <div class="image-container1"></div>
            <p>Technology has also made it simpler to get information, which
is a good thing. People may now obtain information on any subject they desire,
            from anywhere in the world, thanks to the internet. This has
made it simpler for people to educate themselves on a variety of topics and
            for
                businesses to conduct competitor research. For instance,
businesses may now use web resources to investigate the goods and services of
            their rivals,
                which makes it simpler for them to stay ahead of the
curve.<br>Technology has made great impact on the field of education as well.
            Now that internet
                learning systems have been developed, anyone in the world can
access educational materials. No matter where they live, this has made it
            simpler for

```

people to pick up new skills and advance their knowledge. Technology has also made it simpler for teachers to design dynamic and engaging lessons.

For instance, it is now simpler for teachers to engage their pupils because they can make quizzes and games using internet resources.

Entertainment has benefited from advances in technology as well. People may now access a variety of movies, TV episodes, and musical genres from

anywhere in the world thanks to the development of streaming services. People may now more easily enjoy their preferred entertainment no matter

where they are thanks to this. In addition, technology has simplified the creation and distribution of artistic works. For instance, it is now easier

for musicians to reach a larger audience since they can record and distribute their music using online resources. All things considered, technology

has significantly enhanced our lives and changed the world for the better. Furthermore, technology has assisted the environment. For example,

the popularity of electric vehicles has grown, which has contributed to a decrease in air pollution. Additionally, the cost of solar panels has

decreased, making it simpler for people to produce their own electricity. This has helped by reducing our reliance on fossil fuels, which has

improved the environment. All things considered, technology has greatly improved our lives and changed the world for the better.

lastly, despite having its positive impacts technology itself has many negative impacts as well since a coin has two sides it has its negative impacts as well.

</div>

<div class="actual-blog-text2">

<p>We've become more inactive as a result of technology, which is one of its most main drawbacks. People are now spending more time sitting and staring

at screens than ever before because to the invention of smartphones, tablets, and other devices. As a result, there is an increase in obesity and other

health issues, and physical fitness levels are declining. Technology has also made it simpler for individuals to avoid in-person interactions, which has

increased social isolation and loneliness. We are more distracted as a result of technology, which is a further disadvantage. It might be hard to focus on

```

        important tasks when there is a steady stream of notifications,
emails, and other distractions.
        Due to this, productivity has decreased and stress and anxiety
levels have increased. People now find it harder to think clearly
        and make wise decisions as a result of the constant stream of
information.</p><br>
        <div class="image-container"></div>
        <p>
            The fact that technology has increased our dependence on it is
a third unfavorable implications. People tend to depend more and more on
technology
            to complete even the most basic chores as a result of their
constant need to be online and connected. As a result, self-sufficiency has
decreased,
            and anxiety and tension have increased whenever technology is
down or broken. In addition, ongoing demand for improved technologies has
increased
            pleasure and waste.<br><br>The negative effect of technology
is that it has raised our sensitivity to internet risks like cybercrime.
People are
            increasingly posting their personal information and financial
data online as a result of a growing number of online banking, shopping, and
other
            activities. Because of this, it has become simpler for hackers
and other cybercriminals to take this information and utilize it for bad.
            Additionally, it has become even harder for the public to be
safe online due to the constant require for security updates and other
preventative
            measures. </p><br>
        <p>Last but not least, technology has done damage to our
environment. Technology is causing climate change and additional environmental
concerns due to
            continuous demands for electricity and other resources. In
addition, the continued generating and disposal of technology-related
components is a
            factor in the world's waste issue. Overall, despite the fact
that technology has had many positive outcomes, it is crucial to be aware of
its issues
            and take action to decrease them.</p>
    </div>

<div class="actual-blog-text">
<!-- 'Impact of technology while selling Camera Equipment-->
    <div class="actual-blog-text">
        <p class="content">Technology can be worked with when interacting
with potential clients and represent products when selling photographic
devices.

        Snapchat and other social media platforms can be used to
market and advertise photography devices, and tools like Lenses,
        Filters, and AR Try-On can be employed to produce interesting
and interactive material that shows the goods in use. Technology
        can also be utilized to provide additional product
information, such as technical details, reviews, and pictures of the
        product. Customers may be able to make much more informed
selections in regard to their purchases and feel more confidence
        about them as a result. And last, technology can be built to
speed up transactions using digital platforms like payment
        applications, online marketplaces, and other digital
platforms. Customers may find it less challenging to order camera
        equipment and have it administered fast and safely as a
result.</p><br>
        <div class="image-container"></div>
        <p>Technology can be utilized to offer individual suggestions to
clients based on their browsing and purchasing histories in
        addition to the previously mentioned methods. This can make
customers more satisfied and enhance sales by working with them in
        setting up the products that best suit their wants and
preferences.<br>The capacity to offer all round perspectives and virtual
        tours of the products has an impact on camera equipment
earnings as well. Customers may be better able to understand the
        products' size, shape, and characteristics as a result, which
may lead to wiser purchasing choices. Additionally, immersive
        experiences that let customers "try out" the things before
they buy them can be made using virtual reality technology.</p><br>
        <p>Finally, technology can be used to provide better customer
service and support. For example, chatbots and other automated
        systems can be used to answer common questions and provide
support to customers, while social media platforms can be used to
        provide real-time customer service and respond to customer
inquiries and complaints. This can help build trust and loyalty with

```

```

        customers, and can lead to increased customer satisfaction and
repeat business.</p><br>
    </div>

    </div><br>
    <!-- contents of the blog -->
    <div class="actual-blog-text">
    <!-- 'conclusion'-->
        <div class="actual-blog-text">
            <div class="image-container2"></div>
            <p>Human society has mostly become embedded in technology. So many
facets of our daily life would be completely changed without technology
progress.

                Technology works to meet the ever-changing demands of society as
it advances. As society changes, so does technology. Despite this, promotion
has come

                with a price. Each person pays a various price for this, which
varies contingent on how much they value technological and scientific
development in their

                own lives. Networks of Power by Thomas Parke Hughes "compared how
electric power systems developed in America, England, and Germany, showing
that they

                required not only electrical but social 'engineering' to create
the necessary legal frameworks, financing, standards, political support, and
organizational designs" (Stanford University).<br>In other words,
the development and construct of a new technology using scientific means does
not

                ssure its success. The acceptance or rejection of a product by
society, as well as its presence or absence of path dependence, are key
factors in the

                success of technology. Consumers benefit from morphing
technologies in a wide range of areas of their lives, including job hunting,
communications,

                resource consumption, and so much more. The developments that
occur in a wide range of markets benefit society by making it simpler to
fulfill specific

```

```

        duties. Innovation will never stop; rather, it will advance at a
        faster rate as technologies and scientific knowledge advance to ever-more
        cutting-edge
            levels.</p>

<!--reference body-->
<div class="reference-body">
  <h2 class="reference-heading">Reference</h2>
  <div class="reference-body1">
    <p>It's a common technique in web design to create a homepage that is
inspired by another website. By using a certain website as a model,
    we hope to keep the design's core while adding some of our own
personal details. In order to create a familiar yet unique online
    presence, our site takes design elements from the reference page's
user experience, visual aesthetic, and layout. To meet our unique
    requirements and corporate identity, we have carefully modified and
customized the design, delivering an ideal browsing experience for
    those who visit our website. Our homepage displays our uniqueness and
demonstrates our commitment to delivering a user-friendly and
    aesthetically pleasing website, even though it was influenced by the
reference page. We urge you to browse and use our website, which
    expertly combines the greatest features of the reference page.</p>
  </div>

<!--home page-->
<div >
  <h2 class="reference-heading">HomePage</h2>
  <div class="reference-body1 ">
    <p>We developed our own homepage that displays the ideal of design
and benefits, taking reference from the <a
href="https://preview.themeforest.net/item/garcia-camera-store-html-
template/full_screen_preview/24035123?_ga=2.226328403.897259053.1684030364-

<!--product page-->
    <div >
        <h2 class="reference-heading">Product Page</h2>
        <div class="reference-body1 ">
            <p><a href="https://itti.com.np" target="_blank"
style="color:darkblue"> ITTI </a>company has been the biggest online gadgets
selling company and I have had a great experience on its product pagae.So I
took reference form
                this page since it has simpel yet attractive and clean layout,
making people to view things easily and in a more convenient way. The dark
crimson
                red color surely took my attention but since our theme was
based on another color i designed it on the way our theme was and it turned
out to be
                a great prouct page. The aesthetics of ITTI website matches
ours a lot making it more easier for viewers to browse.
            </p>
